

INFECTIOUS DISEASE PLANNING NOVEL CORONAVIRUS

Anticipate. Adapt. React. Evolve.

A national leader in comprehensive catastrophic preparedness,
response, and recovery.

Garner's experience in the field of emergency planning and response is unparalleled anywhere in the world. To ensure a rapid response to all infectious disease outbreaks, all response personnel are HAZWOPER Certified per OSHA 29CFR1910.120, current on vaccinations, and will receive a thorough health & safety orientation before mobilization, upon arrival, and daily, per shift. All operations will be conducted within the established Incident Command Structure and in compliance with the most recent best practices recommended by the WHO and the CDC, response personnel will:

- ✦ Establish Work Zones per OSHA HAZWOPER standards
 - Personnel decon stations & facilities, site prep, stage equipment, premix approved decontamination/disinfecting solutions
- ✦ Prioritize equipment to be decontaminated
- ✦ Wear Personal Protective Equipment
- ✦ Participate in a medical evaluation/surveys at designated intervals as established by Incident Command
- ✦ Be housed separately from the public
- ✦ Have access to medical support personnel 24/7
- ✦ Operate in shifts as designated by Incident Command. No personnel will demobilize the site without written authorization.
- ✦ Continue to be medically surveyed for signs and symptoms. Action plans will be in place per Incident Command recommendations and reports will be submitted, as requested.

EXPERIENCE

Garner, in addition to our sister company OMI, has extensive experience in decontamination/disinfecting operations. Garner also has experience operating one of only two, state-of-the-art **Room Decon System** (RDS) and **Portable Asset Decontamination System** (PADS) in the United States, using a proprietary method for bio-decontamination, sterilizing medical response equipment and hospital rooms.

Garner has served as one of the select companies to work with the **USDA/APHIS/NVS** under the 3D contractor program for foreign animal disease response from its inception, to include responses for **H1N1 Avian Influenza** in 2007 and 2015. In addition, both companies have been involved in **crime scene clean up** and **bloodborne pathogen operations** on a regular basis.

PROVEN DECONTAMINATION APPROACH

- ✦ Phase 1: Gross decon removal by removing excess dirt & debris.
- ✦ Phase 2: Spray solution on surfaces and allow to sit.
- ✦ Phase 3: Final spray & wipe to remove any remaining solution and/or residue.
- ✦ Phase 4: Collect & containerize all consumables used in the decon process for proper disposal.
- ✦ Phase 5: Conduct confirmation wipe sampling, if directed.
- ✦ Phase 6: Personnel exit hot zone.

Garner is a K-Solv Group Company.
