

ROBOT DISINFECTION SERVICES CORONAVIRUS (COVID-19)

Anticipate. Adapt. React. Evolve.

The **Coronavirus (COVID-19)** pandemic has forever changed the world we live in and how we approach emergency response. **Garner's** experience in emergency response is unparalleled, and we continually innovate our approach to better serve our clients. Our new **Robot Disinfection Systems** by Xenex® deliver pulsed xenon ultraviolet light that kill viruses, bacteria and fungi. The LightStrike Germ-Zapping Robots deliver intense pathogen killing power in just 5 minutes covering the full germicidal spectrum for fast, effective surface disinfection. The Robot Disinfection Systems eliminate bacteria and viruses that lurk on surfaces in places like hotels, hospitals, schools, retail and more. Give your employees, customers and guests a **safe, disinfected environment** to return to.

- ✦ Pulsed Xenon technology produces broad spectrum germicidal UV light in the range of 200 to 315nm.
- ✦ Peer-reviewed studies published by Xenex® have found the robots to have decreased environmental infection rates between 50 and 100 percent.
- ✦ For smaller items like PPE and medical equipment, use the Robot Disinfection System with the LightStrike **Disinfection Pod**, a mobile unit lined with highly reflective aluminum-meshed fabric that scatters the xenon UV light.

To ensure a **rapid response** to all infectious disease outbreaks, all response personnel are **HAZWOPER** certified per **OSHA 29CFR1910.120**, current on vaccinations, and will receive a thorough health & safety orientation before mobilization, upon arrival, and daily, per shift. All operations will be conducted within the established Incident Command Structure and in compliance with the most recent best practices recommended by the **WHO** and the **CDC** for COVID-19.

EXPERIENCE

Garner, in addition to our sister company OMI, has extensive experience in decontamination/disinfecting operations. **Garner** also has experience operating one of only two, state-of-the-art **Room Decon System (RDS)** and **Portable Asset Decontamination System (PADS)** in the United States, using a proprietary method for bio-decontamination, sterilizing medical response equipment and hospital rooms.

Garner has served as one of the select companies to work with the **USDA/APHIS/NVS** under the 3D contractor program for foreign animal disease response from its inception, to include responses for **H1N1 Avian Influenza** in 2007 and 2015. In addition, both companies have been involved in crime scene clean up and bloodborne pathogen operations on a regular basis.
